About Us

The Coeur d'Alene Window Company was founded on the belief that new windows can be both energy efficient and attractive. Since 1955, three generations of The Coeur d'Alene Window Company's parent, McVay Brothers, have been improving homes across the West. Coeur d'Alene Windows are made in the Inland Northwest with pride so you can relax with the knowledge that your new windows have been built and handled with care.

Beauty

Each Coeur d'Alene Window is built with an attractive beveled exterior and smooth, clean interior lines.

Three interior woodgrains available.

Grid Options

Coeur d'Alene Windows are available with a variety of grid options. Ask your sales representative for a complete list of offerings.

Specialty Windows | We can produce just about any style of

The Glass

All Coeur d'Alene Series Windows come standard with Cardinal R, LoE³-366[®], Argon gas, Neat[®] Glass and Preserve[®] Protective Film.

LoE³-366[®]

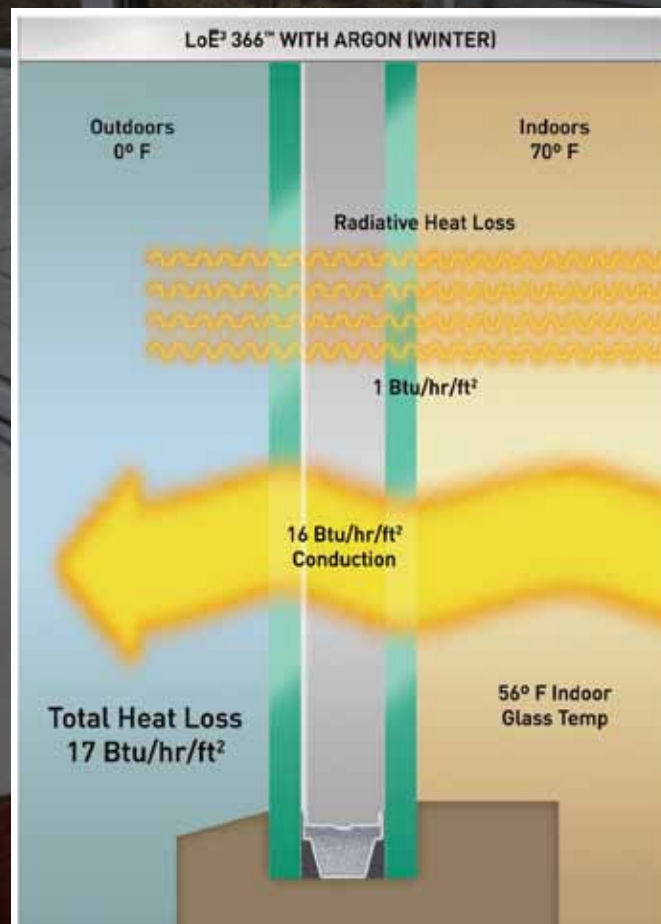

For years, Cardinal LoE²[®] has been setting the standard for energy-efficient glass. Top-of-the-line residential window and door manufacturers all rely on our high quality. Our patented, state-of-the-art sputter coating processes are unmatched by any other glass manufacturer.

Now they have raised the bar. LoE³-366[®] adds a third layer of silver coating. Result: a clear coating that blocks even more solar gain, reflects heat and lets the light stream in. All with a minimum of exterior reflectance. And no heavy bronze or smoke colored tints to darken your home. LoE³-366[®] actually outperforms the tinted glass often used in warm climates.

Intelligent Design

Our windows are designed with built in advantages such as internal walls that drain water rather than allowing it to build-up. Our weep holes are off-set to prevent blow back in the wind. Finally, all Coeur d'Alene Series Windows include additional internal walls to improve stability and resistance to temperature change.

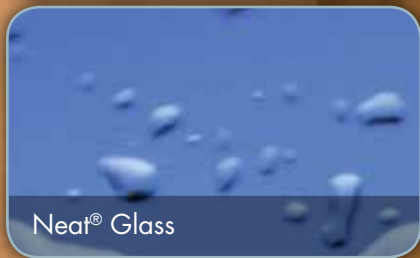

Protection

All Coeur d'Alene Windows are backed by our exclusive lifetime limited transferrable warranty. The warranty covers you and your new windows for as long as you own your home. It's transferrable too which can help with resale value and protect you into the future. Ask your distributor for a copy of our warranty for complete details.

Ordinary Glass

Neat® Glass

Neat® Glass

The titanium dioxide layer of Neat® glass reacts chemically with the sun's UV rays and causes organic materials that are on the glass to decompose. It works even on cloudy days, as 80% of UV radiation gets through cloud cover. Thus when it rains, the decomposed dirt no longer clings to the glass, easily rinsing away. And Neat® glass is ultra smooth. A thin layer of silicon dioxide makes Neat® glass exceptionally smooth and hydrophilic, much smoother than ordinary hydrophobic glass. This allows water to disperse evenly or "sheet off" and evaporate quickly, greatly reducing water spotting

Preserve® Protective Film

Most windows show up to the home covered with finger prints, dirt, and scratches. When you buy new windows, you expect them to be in good condition. The glass on your cell phone and monitor are protected by an easy to remove film when you receive them.

Why should your new windows be any different? You are going to be looking out of these new windows for years to come, shouldn't you expect them to show up protected?

Preserve® Protective Film is placed on the interior and exterior of the Insulating Glass unit immediately after the glass unit is made to make sure that your new windows are delivered to you with care, clean and clear.

XL Edge® Insulating Glass

The XL Edge® Insulating Glass Spacer System has the lowest seal failure rate in the industry (Ask your sales representative for a copy of Cardinal's Residential Glass Technical Guide – p.27). Stop worrying about seal failures and start enjoying improved year-round comfort.

XL Edge® Insulating Glass also delivers solid thermal performance with its stainless steel design and desiccant filled center. XL Edge® Insulating Glass spacer not only performs well, it lasts.

Value

According to the 2008-2009 Cost Versus Value Report® from Remodeler Magazine, replacing your windows with new vinyl windows can be an effective upgrade.

City	Cost Recouped
- Seattle	93.70%
- Sacramento	90.00%
- San Francisco	101.60%
- Boise	79.60%
- Billings	75.20%
- Portland	91.40%

Quality Testing

The Coeur d'Alene Window Company has its products thermally tested with the National Fenestration Ratings Council (NFRC). Please ask your dealer for our NFRC testing sheet. AAMA, IGMA, and supplier internal quality testing information is available as well from your dealer.

Energy Star

Making your home more energy efficient with ENERGY STAR can help to reduce high energy bills, improve comfort and help to protect the environment. Improving energy efficiency is also an important first step for homeowners interested in green remodeling.

The Coeur d'Alene Window Company participates in the ENERGY STAR program and recommends that you buy windows which adhere to ENERGY STAR guidelines.
